

FLASH DESIGN & SPECIAL-FUNCTION SCRIPT EFFECTS **\$75 PER HOUR**

Do you want to bring your web site up to the next level? Flash animations and dynamic script effects impress your web site's visitors and add pizzazz while lending an air of professionalism to your site that straight HTML can't achieve by itself. These cool design effects will draw busy web browsers into your site by adding a bit of movement to captivate them quickly.

Dumas Web Design does not build sites entirely using Flash. We use Flash as a tool to catch your visitor's attention by bringing movement, fun and an innovative feel to our websites. Sites that are built completely using Flash have an extremely small chance of achieving high search engine results. We create our sites using standard HTML along with Flash elements and unique script effects to achieve the best of both worlds. Search engines need text, keywords and code to determine the relevancy of a web site search. Keep your site search-engine friendly, while still providing a little eye candy to draw those customers in!

Dumas Web Design focuses mainly on the non-interactive Flash elements, which includes eye-catching designs like a header with moving elements, fade-in and out blending of images or words, slide shows with fun transitions or photo galleries with entertaining movements. For more advanced Interactive Flash requirements, Dumas Web Design can help you find an experienced interactive Flash designer, which is a specialty unto itself.
